

DATASHEET GSCAPTIVE

GSCaptive is the plug-in captive portal solution for hotels, ships, offices and all other professional environments. Manage, limit and account the Internet access for your guests, passengers or employees. A sophisticated grouping and tariff system fits the needs for all from simple to enhanced pricing models. For accounting a variety of back-ends are available including RESCO SMS and Fidelio Cruise SPMS connectors or use our built-in AAA-system. The modular structure of GSCaptive also enables a low cost integration of new back-ends upon request. The login page can be customized to fit your cooperate design.

This captive portal solution gives you control over the online time and/or traffic of each user, number of devices per user, DNS server and filters (walled garden and black lists). Block individual users, whole groups or shut down the Internet access completely. All this comes with a modern, cross platform HTML5 web front-end with configurable permissions for administrators, manage your captive portal from everywhere, even from a tablet! The software is installed as an appliance which is ready for KVM and VMware virtualization. All configuration is done using the web front-end.

ACCOUNTS & GROUPS

All accounts are managed in groups which can be defined freely. Accounts from external back-ends like RESCO SMS or Fidelio Cruise SPMS are imported and updated automatically when the account logs in for the first time. Accounts and groups can be kicked or even blocked to restrict Internet access. To protect users a credit limit can be defined for each account and the account can be deactivated automatically when a specific date is reached.

The screenshot shows the 'Accounts' management page in the GSCaptive Portal. It features a search bar, a table of accounts, and an 'Add Account' button. The table columns are ID, Account, Name, Status, and Group Name. Each row has a set of action buttons: 'Kick', 'Ban', 'Deact', 'Edit', and 'Delete'.

ID	Account	Name	Status	Group Name	Kick	Ban	Deact	Edit	Delete
6	dionnedavidson@courvoisier.com	Dionne Davidson	enabled	Guests	OK	OK	OK	OK	OK
4	dreadon@eero.com	David Reardon	enabled	Employees	OK	OK	OK	OK	OK
7	jamesdewitt@covox.de	James Dewitt	enabled	Guests	OK	OK	OK	OK	OK
8	ko1980@gmail.com	Kathryn Nichols	enabled	VIP	OK	OK	OK	OK	OK
2	loly@eero.com	Laura Ely	enabled	Employees	OK	OK	OK	OK	OK
1	rhill@eero.com	Roberto Hill	enabled	Employees	OK	OK	OK	OK	OK
3	smith@eero.com	Sherry Smith	enabled	Employees	OK	OK	OK	OK	OK

TARIFFS

Create tariffs which exactly fit your needs. Pricing models include pay-by-time, by volume, flat rates and prepaid tariffs. A tariff can come with free bonus time and/or bonus volume and applies to a selected user group or all users. The number of concurrent devices can be limited as well as the date until a tariff is available to book. For cost control billing intervals allow fine grained accounting and a cost limit can be activated to protect the users.

The screenshot shows the 'Tariffs' management page in the GSCaptive Portal. It features a search bar, a table of tariffs, and an 'Add Tariff' button. The table columns are ID, Tariff Name, Type, Description, Status, Group Name, and Bookable. Each row has a set of action buttons: 'Edit', 'Delete', and 'Add Tariff'.

ID	Tariff Name	Type	Description	Status	Group Name	Bookable	Edit	Delete
3	1 Day Flat for 10€	Flat	One day free surfing for 10€	active	Guests	✓	OK	OK
9	1 Day VIP Flat for 1€	Flat	Lower price flat for VIPs	active	VIP	✓	OK	OK
10	1 Hour Free for VIPs	Time	VIPs get 1 hour free	active	VIP	✓	OK	OK
6	10€ for 100MB+10MB	PrepaidVolume	Buy 100MB, get 10MB free	active	Guests	✓	OK	OK
7	10€ for 2 Hours+10Min	PrepaidTime	Buy 2 hours, 10min free	active	Guests	✓	OK	OK
2	1€ per MB	Volume	Pay 1€ every megabyte	active	Guests	✓	OK	OK
1	1€ per Minute	Time	Pay 1€ every minute	active	Guests	✓	OK	OK
4	5€ for 1 Hour	PrepaidTime	Pay 5€ for one hour prepaid	active	Guests	✓	OK	OK
5	5€ for 50MB	PrepaidVolume	Pay 5€ for 50MB prepaid	active	Guests	✓	OK	OK
8	Free Full Flat	Flat	Free flat for employees	active	Employees	✓	OK	OK

BOOKINGS

Easily manage the bookings of your users with the booking wizard in an intuitive two-step process. Start with searching the targeted user using the auto-complete search form. Then find all information about the user on the left, along with active and historical bookings. Active bookings can be deleted and new bookings can be added using the drop-down box on the right.

DNS & FILTERS

With GSCaptive you get full control over the DNS server and configure allowed IPs of your users. Use the sophisticated user interface to define DNS rules with regular expressions. Add IP addresses to the walled garden to allow users free access to sites like your homepage, tourist or flight information or block IP addresses by using filters.

STATISTICS

The built-in statistics module allows the inspection of your captive portal. Show live information about the number of current sessions, logins and logouts of users. Also view server statistics like CPU & memory usage and network load. All this information is also available to your external systems. This enables you to integrate GSCaptive into your existing monitoring infrastructure.

Take full control
of your internet
connection!

EVENTS & SESSION LOGGING

GSCaptive offers an extensive logging system to analyze sessions, user and system events. Using the built-in tools entries can be queried to exactly identify for example bookings made by users, detailed session data or system offline time. This enables the operator to examine actions and costs of the users right at the front desk.

ROLE MANAGEMENT

The captive portal solution comes with a fine grained user and role management for administrators (RBAC). Permissions can be organized in roles, each service desk manager has a set of roles that exactly define which functions of GSCaptive can be used and what the administrator will see in the front end. Roles can be combined for even more comfort. This can be used to create for example a front desk user who will only be able to manage bookings and take a look at sessions.

USER LOGIN

The users' login page is fully localized (can be maintained from the admin front-end), has a responsive design for various resolutions and works well on mobile devices. It is also easy to change the design to fit your corporate identity and can be included into existing websites or CMS systems. During a captive portal session the user can watch details of their session in a pop-up status window.

Developed
for hospitality
and professional
environment!

FEATURE MATRIX

Supported Platforms ■ Virtual appliance via KVM /VMWare or delivery as hardware appliance

Minimum Requirements ■ 5GB HDD (incl. OS), 4GB RAM, 2 Gigabit Ethernet interfaces
■ CPU depending on number of parallel users

Authentication Back-Ends ■ Internal Accounts
■ External RESCO SMS
■ External Fidelio Cruise SPMS
■ Others upon request

Account Management ■ Generate passwords for new accounts
■ Set account status, validity period and credit limit
■ Print PDFs or send e-mail with account information
■ Manage Bookings

Tariffs & Bookings ■ Select from 4 pricing models: Time / Volume based, Flat rate, Prepaid
■ Give bonus time or volume when booking tariff
■ Set maximum number of clients for tariff
■ Set validity period for tariffs
■ Define session idle timeout based on minimum traffic
■ Decide if a tariff is bookable by clients or by administrators only

Internet Control ■ Disable Internet for all users
■ Kick specific devices
■ Kick / Ban individual users
■ Kick / Ban complete user groups
■ Overwrite DNS Entries
■ Grant permanent access for devices
■ Block web sites by IP address (filter list)
■ Enable free access to web sites (walled garden)

Events & Logging ■ Detailed client device information available
■ View session details
■ Generate status graphs
■ Show and search system events

Permissions Management ■ Fine grained permissions for administrators available
■ Define roles for admin accounts (RBAC)
■ Create limited accounts e.g. for front desk

Configuration & Preferences ■ Configure captive portal from web front-end
■ Set Preferences for each admin account
■ Localize user front-end messages
